VOL. XVI, NO. 42.

GREENVILLE KY., THURSDAY, NOVEMBER 26, 1914.

50c. PER YEAR, IN ADVANCE

FOR BETTER ROADS

COST OF LIVING INCREASED

There Are Times When It Is Impossible for Farmer to Haul His Products to Market.

The people who groan under the high cost of living and wonder why necessities of life like potatoes and cabbages and turnips and apples should be totting on the farms when they would bring high prices in the cities do not realize the condition of the country roads. When roads are bad farmers experience difficulty in getting their produce to market. When roads are very bad there are states of the weather in which the hauling of heavy wagon loads from farms to railway stations becomes impossible.

The farmer would like to sell what he grows. The city dweller would like to buy it. Both have an interest in the building and maintenance of good roads, providing at all seasons of the year available highways between the cities and the farms.

Sometimes roads that would be in fair condition for teaming are cut up by reckless automobilists. The wanton destruction of highways by auto scorches should not be permitted.

Automobile owners as a class have done much to improve some of the roads, but on the whole western roads are a disgrace. There must be aroused public sentiment in favor of good roads. There will be when it is realized that good country roads are a benefit to all classes of the community.

COST OF REPAIRING WAGONS

Farmer's Profits Are Greatly Decreased in Various Ways by Neglected Thoroughfares.

How much do you suppose it costs you a year to repair your wagons and harness on account of bad roads? How much does it cost you a year for shoes and clothing that are ruined by your children wading through the mud to school? How much does it cost you a year for medicine to cure your children's colds contracted in wading through the mud to school and church? How much of a damage a year to you is the mud that prevents your children from attending school; or damage to them, rather in the loss of an education? How much damage to you are our bad roads in preventing your going to market? You are perfectly willing to spend money in the buying of reapers and mowers and other farm machinery. You are willing to purchase carriages and harness. At the price potatoes are today, one load would be the average farmer's tax for ten years for good roads. At the end of that time the

Striking a Rut in a Bad Road.

roads would be good, and you could vote to rescind the law if you wanted to and you would have your good roads and no tax for thirty or forty years, the balance of your life.

Price Is Sticker.
The farmer believes in good roads, but he doesn't feel that he has the price.

Auto Makes Difference.
The road question looks different to a man after he has bought an auto.

Bring Both Together.
Good roads bring the producer and consumer in personal contact.

Good Road Benefits.
Good roads mean good schools; good schools good citizenship.

Squab Broilers.
Squab broilers must not weigh over three-quarters of a pound each; generally a half pound is most acceptable.

QUINCE ALWAYS GOOD

FRUIT, HOWEVER, REQUIRES CAREFUL COOKING.

Excellent When Baked, With the Proper Amount of Sugar—Can Be Recommended Either Made Into Puddings or Tarts.

Quinces, to be good, need long and careful cooking. When they are carefully cooked no fruit of winter can surpass them in delicacy of flavor.

Baked quinces can be prepared in two ways. They can be slowly baked until they are tender, in a covered dish in the oven, or they can be boiled until they are partly done and then baked. To bake them in the first way, wash and core them, and fill the core cavities with granulated sugar. Arrange them in a buttered baking dish and pour water around them. Cover them closely and let them cook slowly for about an hour.

When they are almost done remove the cover and cook a little more rapidly. Then remove the quinces and reduce the syrup in which they were cooked by boiling it rapidly for a few moments, pour it over them and chill them. Serve with a tablespoonful of whipped cream on the top of each.

To cook them in the second way, peel them and parboil. Put them in a baking dish and pour the water in which they were cooked, made into syrup with the addition of sugar, around them. Bake them, covered, for an hour, or until they are tender. Remove them; reduce the syrup and pour it over them and serve cold.

An easily made quince pudding is this: Choose half a dozen fine large quinces, and boil them until they are soft. Then peel, core and mash them and add the yolks of four eggs, beaten with a pint of cream. Sweeten to taste and season with ground ginger and cinnamon. Bake in a moderate oven for three-quarters of an hour and serve with cold custard sauce.

There are several ways of making quince tarts. One way is to combine the quinces with apples in this manner: Peel and core two pounds of well-flavored apples and cut them in thin slices. Arrange them neatly in a pie dish—a deep one. Add a pound of quinces that have been sliced thin and stewed over the fire in a very little water, some sugar, and a bit of butter. Add a generous quarter of a cupful of sugar to the fruit and a little grated lemon rind, and the water in which the quinces were stewed. Cover it with a sheet of rich paste. Brush it with egg white and bake for forty minutes. Sift powdered sugar over the top and return to the oven to brown. Serve hot or cold.

Another quince tart recipe calls for stewed quinces, placed in a cooked tart shell and eaten cold with whipped cream, slightly sweetened, over it.

The Flour Bag Brand.

A housekeeper who put her empty flour sacks to various uses found it hard to remove the brand from them. Finally she tried this method. She washed the bags in warm suds, wrung them and spread them upon the washboard with the name side up. On this she rubbed a thick layer of soap or of washing powder. She rolled this all up tightly and placed it in pan of cold water set it on the stove to boil. She let it reach the boiling point without stirring it, then removed it from the stove and washed it in clean suds. This she found invariably removed the lettering.

Pie Without Crust.

For the dyspeptic and children, pie without a crust will be welcomed. There are people, further, who enjoy the filling and eat the crust under protest. In the case of custards the crust is more often sodden than crisp. The filling mixture of such pies are custards of any variety, such as egg, sweet potato, squash, pumpkin or coconut and should be baked in a deep pie plate, but without the accompanying crust. They may even be topped off with a meringue.

Near the Ham Bone.

In the country, where ham is the standard meat, the housewife often wonders how to serve daintily the portion near the bone which is so hard to slice. Chop it and mix it with scrambled eggs, or use it as a garnish for poached eggs, or put it through the meat grinder, season, mix with a little melted butter, pack in a tumbler and cover with paraffin; it will keep in the refrigerator until you want it for sandwiches.

Bologna Sausage.

Chop five ten pounds of beef and two and a half pounds of pork, add a quarter of an ounce each of powdered cloves and mace, two and a half ounces of powdered black pepper, and salt to taste. Mix this well and let it stand 12 hours. Stuff into coarse cotton bags ten inches long and four inches wide. Lay them in ham pickle five days and smoke them eight days, then hang in a dark place.

Date Cake.

One cup sugar, one-half cup butter, one-half cup milk, two eggs, one and three-quarter cups flour, one teaspoonful baking powder sifted with the flour, one-half pound dates stoned and chopped; good frosted or without.

Fish Tost for Tea.

Pick in pieces bits of cold fish, put in a saucepan with two tablespoons each of flour and butter. Mix well and add a pint of boiling water. Have ready hot slices of buttered toast pour the fish over and serve.

DAIRY FACTS

EXCELLENT FOR FAMILY USE

Small Quantities of Butter May Be Made by Self-Operating Churn Designed by Nebraska.

I have a handy little churn to make small quantities of butter of cream that is still sweet and fresh, writes Jacob M. Friesen of Jensen, Neb., in Farmers Mail and Breeze. Two shelf brackets AA were fixed to the wall as shown in the drawing. The springs

Self-Operating Churn.

UB are the long, flexible kind used on doors. C is a frame made of two square pieces of inch boards, and four long, thin bolts. This frame holds the fruit jar D firm while in use. The springs are fastened to the top and bottom boards of the frame. When ready, raise or pull down the jar, then release it, and you will find it will keep in motion a long time.

ECONOMICAL FEED FOR COWS

Home-Grown Foods, as Rule, Should Form Main Reliance of Dairyman—Some Good Lessons.

(By M. K. WOODWORTH)

Economical feeding of a dairy herd is a subject which cannot be fully explained in a short paper, but there are a few points which I might mention which would cause the reader to further investigate for himself. If I could say something that would cause dairymen to look into the matter, my best hopes would be realized, for it is easy for a man to be shown after he is willing to learn.

As a rule home-grown foods should form the main reliance, but commercial feeds and purchased grains will necessarily occupy a more or less prominent place in dairy rations for years to come. How much of these feeds we can use at a profit depends upon their cost and the quality of the cows we are feeding. Generally speaking, the man who is producing the city milk can afford to feed more grain than the man who is producing products that can be held over in storage for longer periods of time.

Viewed from another standpoint, the cow that is fed starvation rations and those fed more than they can digest and turn to a profit, are both losing money for their owners. It is somewhere between these extremes that the successful dairyman must set his standard. It is his business to find out and no dairy authority on earth can inform him intelligently. It is one of the many lessons we must work out by associating with our stock.

Durability of the Silo.

The durability of the silo should be well considered before building. Many of the cheapest silos have proved to be the most expensive, owing to the fact that they have maintained their efficiency for a few years only. In silos as well as all other buildings it will be found most economical to build good ones.

The materials used should consist of wood, tile, brick, stone, cement blocks or solid concrete. Considering the durability and the cost, the reinforced concrete silo is to be recommended.

Increases Dairy Profits.

One way to increase profits on the dairy farm is to get rid of the poor cows.

Whitewash Is Cheap.
Whitewash is so cheap that its cost does not excuse having plenty of it in the hen houses and cow barns.

No Profit Expected.

The dairy cow cannot be expected to make large profits from improper care and improper feed.

Millet Is Fair Hay.

Millet is only a fair hay for dairy cows.

Stimulant of Flow of Milk.
Ordinary care will not stimulate a large flow of milk.

DEVICE FOR PILING STUMPS

Machine Designed by Wisconsin Man Found Quite Successful—Details of Construction.

A stump and log piler which has been quite successfully used by many settlers in upper Wisconsin is that which was designed by Frank Conrath of Rusk county. After the stumps have been pulled or blown out the piler can be moved into the field and the "roots" and waste logs can be piled ready for burning. By tilting the piler on one side the swinging boom or arm will carry the stumps to the lower side of the machine where they can be easily piled, says the Iowa Homestead. Following is the bill of lumber and hardware required to construct a piler: Three skids (6 inches by 8 inches by 22 feet), three

Stump and Log Piler.

cross beams (8 feet long), two standards for a frame (3 inches by 8 inches by 18 feet), two brace poles (6 inches by 6 inches by 20 feet), one pole for swinging boom (8 inches by 8 inches by 20 feet), a few timbers of planks to get boom on, 150 feet (1 inch by 2 inches) steel cable for main line and guy ropes, three steel blocks for main pulling cable and two small blocks for guy cables.

KEEP ACCOUNT OF EXPENSES

Few Minutes Needed to Keep Up Set of Books Will Yield Large Returns to Farmer.

(By R. G. WEAVERSTONE)

A farm is a combination of enterprises, and a study of each enterprise in its relation to the others is of the utmost importance. Wheat may be a profitable crop to grow, oats an unprofitable crop. Records of the separate farm enterprises will show the facts in each case.

Labor distribution records are set down kept by farmers, yet such records are in many respects equally as important as the cash account. A good bank balance is often the result of the efficient use of farm labor.

Crops which are grown at a profit may, by being fed to a poor class of live stock, have this profit turned into a loss. Live stock records, although not so easy to keep as those on crops, are often more useful to the farmer. It is poor policy to lose by judicious feeding the profits on the crops grown.

Live stock production records are a guide to the qualities of animals kept; such records are of the utmost importance to the dairyman.

Good accounts are within the reach of every farmer. The few minutes regularly spent on them will yield larger returns than an equal amount of time devoted to farm work, provided proper use is made of the information the records contain.

CARE OF HORSE AND STABLE

Powder Good for Skin Disorders Is Given—Many Crooked Legs of Colts May Be Saved.

The following powder given each day is said to be good for skin disorder in horses: Finely powdered iodine of potash, four ounces; granulated sugar and common salt, of each one pound. Mix well together and divide into 32 powders. Feed no corn but let the grain feed be oats and wheat bran. Use tincture of iodine on the humps every second day until the skin becomes a light tender.

Dr. Smeed says that many a crooked humped colt can be helped by using a mixture of alcohol two parts and olive oil one part on the knees and tendons twice per day and each thorough hand rubbing. Each time straighten the leg and bring it into place several times. This will stretch the tendons and loosen up the joints and ligaments. Don't be afraid to rub and manipulate the legs into proper form.

Garden Rubbish.

A few old fence rails, built together in a square in the garden, will hold all the rubbish that is fit for decomposition. Add to it the weeds from the garden and manure and all ashes from the house. Pour the wash water over it and allow it to pack thoroughly. It will be of value for next spring, while it concentrates now all the wash refuse and prevents the hens from broadcasting it again.

Profit in the Hog.

Years of experience and close observation, together with a carefully kept account of all feed, etc., have demonstrated that there is no more profitable animal on the farm than the hog, and no variety of farm stock that will so quickly lift a man from dependence to independence when properly fed and cared for.

Quail Is Neglected.

A part of the poultry on the farm is that covey of quail you have observed in the back fields somewhere, and a little attention to those small fowls is worth while.

Treatment of Diarrhoea.
The best treatment for young chicks with diarrhoea is boiled rice and boiled milk.

Saved Girl's Life

"I want to tell you what wonderful benefit I have received from the use of Thedford's Black-Draught," writes Mrs. Sylvania Woods, of Clifton Mills, Ky.
"It certainly has no equal for la grippe, bad colds, liver and stomach troubles. I firmly believe Black-Draught saved my little girl's life. When she had the measles, they went in on her, but one good dose of Thedford's Black-Draught made them break out, and she has had no more trouble. I shall never be without

THEDFORD'S BLACK-DRAUGHT

in my home." For constipation, indigestion, headache, dizziness, malaria, chills and fever, biliousness, and all similar ailments, Thedford's Black-Draught has proved itself a safe, reliable, gentle and valuable remedy.

If you suffer from any of these complaints, try Black-Draught. It is a medicine of known merit. Seventy-five years of splendid success proves its value. Good for young and old. For sale everywhere. Price 25 cents.

50 CENTS PER YEAR, IN ADVANCE.

THURSDAY, NOVEMBER 26, 1914.
Entered at the Greenville, S. C., postoffice as second-class matter.

War news begins to resemble the details of a clinic.

Money now has only a federal reserve, whereas previously it had an air of extreme haughtiness.

Europe might try giving itself lasting peace on golden rule principles as a Christmas present.

Cotton is worth 18 cents a pound in Germany, but there is no way of sending cotton by wireless.

Those Russian and German adversaries seem to be better at backing the line than at kicking goal.

One shudders to think what moonshine vodka will be when the backwoods Russians begin its manufacture.

One cheering sign of the times is the fact that economy is again coming to be regarded as a virtue. For some years it has been classed with poor relations and family skeletons.

A big neutral nation is of more value now to the countries at war than another ally. The United States has got to be neutral, and it is better to be neutral than to be a bystander.

WHAT is the latest physiological fact? "Blood pressure" seems to have the call. Young does scarce dry behind the ears and old whiskered medics alike are prating of "blood pressure." It bears out our theory that the doctor of the future will be a plumber and machinist.

While engaged in dropping bombs upon Antwerp one of the German Zeppelins was made the target for a Belgian battery, with the result that one of her propeller frames was badly damaged. This seriously interfered with the operation of the ship, and although it is said to have been 6,000 feet up, one of the mechanics of the crew climbed out on the injured framework, and in the course of half an hour cut away the damaged parts that prevented the machinery being operated. After this feat, while the ship was racing away at high speed, the same man repaired a long rent in the hull that had been made by a shell.

At the Fourth American Road Congress, held at Atlanta, November 9th, the U. S. Department of Agriculture exhibited a complete set of models illustrating the construction and maintenance of standard types of roads. Included in this set were models showing the development of stone road building for 2,000 years past, among which were the Appian Way, representing an ancient Roman type of construction, samples of early French roads, the Telford, and early and modern Macadam roads. Other models shown illustrated questions of road location, bad alignment, improper grades, dangerous crossings, unsafe bridges and many other features necessary to understand when laying out good roads. The whole field of road building was covered, and it was the most complete educational exhibit ever attempted in this country. All of these models made on a scale of 1 inch to the foot, were large enough to perfectly illustrate their point. Besides the models an automatic projectoscope presented self reading lantern slides, while sets of motion picture films showed various construction scenes. This Congress was the most important and successful yet held, and accomplished encouraging work in the way of enlightenment and stimulating public interest in this important movement.

Good News.
The Kaiser, the President, the Prophet and hero of the Mexican war of 1914 has had a vision; he was in the spirit about the 18th of November and dictated glorious news to one of his Secretaries, telling that a glorious period was rapidly approaching this country, for in his vision he beheld the bright dawn of a millennial era, illuminating the horizon of this nation and soon to overspread it from sea to sea, under whose genial rays prosperity would spring up throughout the entire nation like mushrooms in the marsh; that coffee would grow on white oak trees and rivers flow with brandy; that peace and plenty would reign supreme; that all the strife, contention and antagonism, the oppression and tyranny that has been endured by the people for the last fifteen years would cease to exist and that the people would realize that they were all in the same bark sailing towards higher life and peace and would become united in love and friendship, feeling that they had been redeemed from the miseries and persecutions of the past, and the groans of disappointment and deprivations would cease to be uttered and sighs of sadness and misfortune would be hushed. Now this was a glorious vision. But the prophet did not specify definitely the cause or causes of all these wonderful happenings, whether it will be the outgrowth of his Kaiserism or his military exploit with Huerta and the flag, or the reduction of the tariff and the establishment of Regional National banks, or the war going on in Europe, or the war tax levied in this country. Now we suppose that he meant that all of these things combined have opened up the way for this glorious period, which he anticipated. So let everybody hold their breath, stand still and see the salvation of the Lord and of the Kaiser.

A Booming Community.

We are authorized by Prof. Will Young, of the Pleasant Hill school, that on account of bad weather the Pleasant Hill Helpers' club will not meet any more this year, but discontinue their work with Mrs. Ula Blackwell as president, who will hold office until another is elected in 1915, when the work will be taken up. The good Roads club will continue its work through the winter in its usual way of keeping up the public roads of the community.

Mr. Young wishes to thank the people for their support in these two great organizations. The people are no longer asleep but are awake and ready to do all they possibly can for the uplift of their community. They believe in a more efficient education. Educate the children for the good they do their fellowman and themselves. Prof. Young showed his personality, ability to organize and confidence in the people when he marched to the school fair with a larger representation of any one room rural school in the county. He showed in a great measure what the one room rural school can do where the teacher has the personality to get the cooperation of the patrons of the community. His show consisted of twenty mules, six to each of the boys and girls' wagons, four for the Helpers' club and four for the Good Roads club. Look what it means from a one room school.

Mr. Young is a man of scholarship and enthusiasm. No one without these things could have brought such a delegation from a one room school, seventy pupils, of whom sixty-five were absolutely in attendance.

He regrets that he is not able on account of his large attendance to perform the work as he had it planned for this year. He expected to organize a night school, but on account of his large attendance each day, he is not able to do the work in the day and then teach at night. He tells us that after February 1 he will be a student in the Bowling Green business university, and will after completing his course enter the field as a commercial teacher, and will probably teach one more rural school. We are sorry to lose him as one of our county's teachers, but we are not sorry to see him leave for we know he will make good in the commercial work as he has here. We hope him much success.

J. F. K., Sub. Dis. Trustee.

Cheap Fuel: Buy an Auto.
News which will please every automobilist as well as every prospective owner, and not less so the auto maker, is being given in the present test of a new fuel, discovered by John Andrus, a scientist of Pittsburgh. At Indianapolis last Friday and Saturday a Marmon car, with top and wind-shield raised, drove 1,000 miles with this fuel, at an average speed of 55.25 miles per hour, and an average mileage of 7.42 miles per gallon. The test was made under the supervision of the A. A. A., and after inspection of the engine every part was as clean and perfect as when started on the long continuous grind. The fuel is 96 per cent. water, the balance being dry and fluid chemicals, the cost per gallon of fuel not exceeding 2 cents. The great saving in cost is the main feature of the new power producer, but the ease of making will enable one to prepare fuel anywhere, the chemicals being easily carried, and water being found anywhere. To tourists this will be especially appealing, as there will be no chance of getting left on the road for lack of gasoline. It will not be necessary to start out with 100 to 200 pounds of gasoline, only a few gallons being needed at a time, thus saving weight and avoiding danger from fire in case of collision. Much effort is being employed and genius put forth in the elimination of expense in operating cars, and reducing weight is one of the strong points receiving attention. Now, with the perfection of the air cooled engine several hundred pounds would be lopped off, and with fuel at 2 cents per gallon, nobody could afford to be without a car. These and other features will no doubt be worked out in a short time.

"Tom Thumb Wedding," given by local children, drew a large audience to the opera house Tuesday night, and the little actors won hearty applause, each one doing splendidly. The Christian church, under whose auspices the play was given, received a substantial sum from the proceeds. Miss Kate R. Campbell, of Kansas City, was the director.

The Queen theatre opens tonight under new management, with Mr. Roy Wells as manager, and the public is guaranteed the best in the moving picture world.

Multiple Sclerosis.

This disease, also called disseminated sclerosis and insular sclerosis, is caused by scattered patches of hardened tissue in different parts of the nervous system. It is a form of paralysis that comes on very slowly, and it generally attacks persons between the ages of fifteen and thirty. Sometimes, although rarely, it appears in young children; people who have passed their fortieth birthday seem to be safe from it.

The patches of hardened tissue are scattered through the brain and spinal cord, and as they grow, they press on the nerves and injure them. The symptoms vary greatly, because they depend on the part of the nervous system that is affected. As the disease develops very slowly, and usually attacks young people, its earliest symptoms are sometimes mistaken for hysteria. Besides the nervous symptoms, there may be headache and vertigo, and a loss of muscular control in walking. Other cases begin suddenly with an attack like that of epilepsy, and still others begin with the symptoms of spastic—that is, characterized by spasms—paralysis.

One of the most striking symptoms of multiple sclerosis is tremor. That is very likely to appear first when the patient is writing. As time goes on, whenever the patient attempts to perform any voluntary act, the tremor seizes him, and it may be so violent that he is compelled to desist. The trembling is not present during sleep. Anything that agitates or annoys the sufferer makes it worse. Other symptoms are double vision, and a peculiar, slow, dragging speech. The disease may cause epileptic fits, and is sometimes accompanied by a failing mind.

The disease is almost incurable, although it often runs a very long course, and may be arrested for years. The treatment therefore aims at checking its progress; and the patient must be careful to follow closely all the laws of health. The diet should be simple and wholesome, tonics should be given when necessary, and the patient should stay and sleep as much as possible in the open air. A quiet life, free from all strain and excitement, is absolutely necessary.

FRUITS
We have nice variety of fruits of all kinds left. We stocked up heavily for the Thanksgiving trade and can furnish most anything you want. Can offer you nice Baldwin apples at 25c. peck, they are nice eaters and good keepers, also have Grapes, Raisins, Figs, Dates, Oranges, Bananas, Grape Fruit, etc.

Greenville, Ky.

ROADISMS

By Z. D. DUNLAP,
Assistant Director General National Highways Association.
All good people want good roads. European wars don't worry our roads. Get busy and do your part in lifting Kentucky out of the mud. Good roads and a merchant marine will be worth more to this nation than an ocean filled with battleships. We lead the world in everything else, why not in good roads? Don't put a gauge on your enthusiasm for good roads. There are no meter rates. Road improvement is for your own personal benefit and profit.

If you are a progressive citizen, you are interested in good roads because you cannot progress so long as your State and nation remain in the mud.

Do you realize that bad roads are costing you enough each year to make those roads permanently good?

Only through moral suasion and appeal to men's reason can the Good Roads Movement succeed.

Ninety per cent. of travel is between towns and between cities.

Mr. Manufacturer, Merchant and Professional Man, you should take a hand in helping to create a strong and powerful sentiment for good roads in Kentucky.

Congress must set a definite plan for a national solution of the road problem under Federal auspices, and Congress cannot postpone action much longer.

Organization we must have in every county and State if we expect Congress to take any real interest in the road question. Every other interest is powerfully represented at Washington.

The advent of the automobile has done much to improve road conditions, and not only made road enthusiasts out of knackers, but has acquainted the city folk with the conditions and the surroundings of rural folk.

Don't worry relative to what becomes of the \$5. The Kentucky Good Roads Association does not expect to spend any part of it on you. There are many sections of the State that need the education which can only be given by a State organization. Put your shoulder to the wheel and help. Don't lag behind, waiting for the other fellow to start; the other fellow might die.

Your work in the road movement must be in earnest, zealous and unselfish.

This is an age of progress in the United States in every sense, and the progressive movement should include within its scope the improvement of every important road in the country.

The improvement of raw highways is always followed by the improvement of all things which mean better road conditions: We must have cheaper transportation over our roads. The movement of either 1912 or 1913 crops cost the agricultural interests of the United States \$137,000,000 more than it ought to.

Don't get impatient because the endeavors of the Kentucky Good Roads Association do not bring immediate results. Remember, Rome was not built in a day. Don't say "don't" to any proposition respecting better roads. A "don't" never grew into an "I willer." The biggest thing conceived is the easiest thing to do, so do your part in making Kentucky the home of good highways.

NO SMOKE, NO ODOR
The quality of Lamp Oil you use counts immensely for or against your comfort and health. There's a perfect oil made for people who give thought. It is
SOLITE OIL
refined from Pennsylvania Crude Oil—the best ever made. Full white flame—never flickers—no soot—no odor. Costs no more than inferior tank-wagon oils—saves money as well as eye-sight and comfort. Your dealer has it in original barrels direct from us.

Protect Your Children's Eyes

THE greatest desire of parents is to see their children well nourished, strong and healthy—physically well equipped to make a success of life.

Yet, how many parents are there who endeavor to protect that most important sense of all—the eyesight of their children by providing the most suitable light for the study hours?

Modern methods of schooling and the necessity for completing their primary education at an early age imposes a severe tax on the eyes during the growing period of life. In many cases this strain weakens the eyes, or results in loss of sight simply because the little ones are compelled to study under a poor or improper light.

Edison Mazda Lamps now afford the most suitable electric light to study by as well as for general home use, and furnish it at minimum cost.

Give your children the benefit of this light. We will be glad to advise you as to the most beneficial way to use Edison Mazda Lamps.

Local Mention.

Basket ball here Monday night.

Stores and shops are all closed today.

See Mac for staples and novelties in jewelry.

Roads in Muhlenberg have been extra fine this fall.

Last chance to pay your taxes and save penalty.

A beautiful supply of rabbits is making meat plentiful.

Mr. and Mrs. C. W. Roark are in Louisville for a few days.

Thanksgiving here, and Christmas less than a month away.

Some persons are having quail, but the supply is not very heavy.

You are lucky, and should be thankful—so help some one today.

Rabbits are plentiful. A dealer bought 64 from one man one day last week.

The Greenville Transfer Co. is planning to install an electric bus and also a truck.

Mr. W. H. Brizendine was in Louisville the first of the week on business matters.

One price, 10c. to all, at the Queen, under new management. Opening tonight. Go.

Mr. and Mrs. Paul Pannell have a fine girl at their home since Sunday evening; it is their firstborn.

Not too early to select your Christmas gifts, for many have already done so at McCracken's shop.

There are enough rewards offered to draw some of the best detective talent of the country to Muhlenberg.

Worthy and useful Christmas remembrances can be found in abundance at McCracken's jewelry store.

See the list of attractions for the Lyceum course this winter, and secure season tickets, thus saving half.

The automobile fleet will be largely increased here next spring, both in pleasure cars and trucks and busses.

Mr. Roy Wells is the new manager of the Queen theatre, and will provide the very best in moving pictures.

Call at Countzler's or Hale's and get your season tickets to the Lyceum, and have them reserved. Tickets are going fast, and everyone should buy for the season, and thus save half the price.

Governor and County Judge Offer Rewards.

Read the rewards being offered by the Governor and County Judge for the apprehension of persons engaged in recent acts of outlawry in this county. The officers are determined to break up this reign of terror, and everybody in the county has been aroused to a point where they are lending every support in the effort. For the past ten days there has been no disorder, and it is sincerely hoped that the crisis has been passed, and the Muhlenberg citizens will dwell together in peace and happiness, leaving to the organized forces of the law the adjustment of all matters of difference.

Home From Detroit.

Mr. Rudd Reno is here from Detroit, on a visit to his father, Mr. Ed Reno. He reports that conditions are very quiet in the automobile center of the world, as thousands of men are being let out by the various great industries of Detroit, as well as other places in the north. Car makers are letting more help go than any other line, as there is the usual winter dullness on in that industry.

Go to the Queen tonight and see the best pictures. Go every night, for the show is open under new management, and will nightly offer the best pictures to be had.

Basket Ball Monday Night.

The basket ball season opens here Monday night, when the local team will play the Central City team in the Y. M. C. A. gymnasium. It is expected that a large crowd will be in attendance, as both teams are said to be in fine shape, and the contest will be lively.

About a hundred season tickets have been sold for the lyceum course. Better hurry and get yours, while there are plenty of good seats.

To Have Home Coming.

The I. O. O. F. lodge will observe a home coming at the lodge room next Saturday night. Invitations have been issued urging all members, old and new, to be present, and a general good time is assured. Special work will be done, and refreshments will be served.

The many friends here of Rev. Geo. H. Givan, former pastor of the Methodist church at this place, will be glad to know of his continued progress in the recovery of his health. Also that he has been elevated to the important office of presiding elder, being in charge of the Albuquerque district, one of the most important in New Mexico.

The Thanksgiving service will be held at the Christian church, Rev. McVee, pastor of the Methodist church, delivering the sermon. The service will be held at 10:30 o'clock.

The Greenville Light & Water Co. has purchased a 2½ ton electric truck from the Kentucky Wagon Mfg. Co., of Louisville, delivery to be made early next spring. This will be a step in the right direction, and will prove a convenience and at the same time a money-saver.

McCracken, the jeweler, has hundreds of staple and novelty items for Christmas gifts, many of them exclusive here. Call and see his offerings.

Rewards.

In the name and by the authority of the Commonwealth of Kentucky James B. McCreary, Governor of said Commonwealth.

Whereas, It has been made known to me by the Judge of the Muhlenberg County Court that unknown person or persons stand charged in said County with the murder of Henry Allen and now a fugitive from justice, or fugitives, going at large; and

Whereas, The said Judge has recommended that a reward be offered for the apprehension of said fugitive, or fugitives

Now Know Ye, That by virtue of the authority vested in me by law, I do hereby offer a reward of Two Hundred Dollars for the apprehension and conviction of the said unknown persons and his or their delivery to the Jailer of Muhlenberg County.

In testimony whereof, I have hereunto set my hand and caused the Seal of the Commonwealth to be hereunto affixed.

Done at Frankfort this 14th day of November, 1914.

JAMES B. MCCREARY
By the Governor C. F. CREELIUS,
Secretary of State.
By CECIL H. VANSANT
Assistant Secretary of State.

State of Kentucky,
County of Muhlenberg, Set.

A PROCLAMATION

Whereas, it appears to me that some unknown person or persons stand charged with the murder of Henry Allen, a citizen of Muhlenberg County, and that said person or persons are now fugitives from justice and at large, and Whereas, James B. McCreary, Governor of Kentucky has offered a reward of TWO HUNDRED DOLLARS for the apprehension and conviction of said unknown persons now, therefore, by virtue of the authority vested in me as Judge of the Muhlenberg County Court I do hereby supplement the amount of said reward by an additional sum of TWO HUNDRED DOLLARS for the apprehension and conviction of said unknown person or persons.

In witness whereof, witness my hand, this November 23, 1914.

J. J. Rice Judge Muhlenberg County Court.

State of Kentucky,
County of Muhlenberg, Set.

Whereas, it appears to me that some unknown person or persons stand charged with unlawfully and wrongfully beating, whipping and bruising one Frank Lee and one I. E. Covington, both citizens of Muhlenberg County, and that said unknown person or persons are now fugitives from justice and at large, now, therefore, by virtue of the authority vested in me as Judge of the Muhlenberg County Court I do hereby offer a reward of ONE HUNDRED DOLLARS for the apprehension and conviction of said unknown person or persons guilty of either or both of said above mentioned crimes.

In witness whereof, witness my hand, this November 23, 1914.

J. J. Rice Judge Muhlenberg County Court.

Farmers will now be able to store the corn, as there have been a number of frosts and some freezing weather to cure it for housing.

Snow and Ice Make Early Visit.

We had an inch snow here last Thursday, the fall occupying most of the morning, with some rather strong flurries at times. The ground was in good shape to receive it, and for several days there were patches to be found on northern protected areas. Friday morning the thermometer ran down the tube to various points from 3 to 7 degrees above zero, according to various thermometers. This was the coldest weather we have had here in November since 1872, according to the weather bureau, and there was considerable damage to plumbing from freezing. Many persons lo-t flowers in the house, also, the snap being unexpected, and considerable quantities of fruits and vegetables were ruined. This was as cold weather as we had during last winter, but it endured only for the one morning.

R. L. Red Cockerels for Sale.

I have a few R. L. Red, S. C. cockerels for sale; high strains; will sell cheap.

Z. T. Bowers, Luzerne, Ky.

There will be plenty in many homes today, even if the fare is scant at other times.

The Central Life Insurance Co., of Kentucky has received applications since January 1 amounting to more than

\$12,000,000

Which is three times as much as has been received by any other company operating in this State. For further particulars see or address

A. C. WICKLIFFE, Mgr.

HOPKINSVILLE, KENTUCKY

WE SHOULD BE THANKFUL, BECAUSE—

TURKEYS are not extinct
HALF a dollar will buy a tall d'hot dinner.
APPLE pie is not all made in factories
NUTS and raisins can be eaten even when you haven't room for anything else.
KNIVES and forks still have work to do.
SWEET potatoes haven't gone out of fashion.
GRAPE juice has the approval of the department of state.
ICE cream is sometimes made of cream.
VERY little turkey will be left to make hash of.
INDIGESTION comes after dinner—not before.
NEW sweet cider is in season.
GRANDONZOLA cheese is not compulsory.

PNEUMATIC OFFERS GIVEN QUICK RELIEF

It leaves almost as if by magic when you begin using "5-Drops," the famous remedy for Rheumatism, Lumbago, Gout, Sciatica, Neuralgia and all kindred troubles. It goes right to the spot, loosens the aches and pains and makes life worth living. Get a bottle of "5-Drops" today. A booklet with directions for use, and a return date stamp on condition that this number was to be repeated. American Quartet, December 7.

THE AMERICAN QUARTET.

The American Quartet and Clayton Conrad will render a program consisting of both vocal and instrumental music, interspersed with cartoons, just such a program as Lyceum audiences delight in.

The instrumental music will be presented by three members of the quartet on the violin, cello and piano.

The length of the program will be about one hour and forty minutes, one-half hour being devoted to the work of Mr. Conrad, the cartoonist.

Clayton Conrad features speech in drawing his pictures. His experience in newspaper cartoon and commercial art work, combined with fine ideas of

color, fits him well for the position he holds with this company.

The pictures he draws in color are original and are new ideas presented in a novel way. He uses two easels. Mr. Conrad has made a special study of coloring, and the results he obtains in a few moments with crayons are truly wonderful.

When you hear Mr. Conrad read and picture "The Old Red Cradle" you will be convinced that he can also be serious. This number was given so effectively at Williamson, Mich., that a return date was booked on condition that this number was to be repeated.

American Quartet, December 7.

MAKING PROFIT WITH PEARS

Advantage of Dwarf Variety to That They Come into Bearing Early—Rich Soil is Preferable.

Both standard and dwarf pears are desirable for planting. The advantage with the dwarf pear is that they come into bearing early, and never attain a great size, hence are well adapted to planting where the ground is limited. Then they usually come into bearing so early, two or three years after planting out, that several crops may be secured before blight kills the trees.

They are, however, not as long lived a tree as the standard, and in one sense this is an objection, as it necessitates planting often. But it will be an exception even on a small place, when it will be best to plant a few dwarf pear trees, the number being proportioned to the number of trees planted.

Standard pears, if kept healthy, are very long lived, and they will bear fruit a long time, but they are longer coming into bearing than the dwarf, and need considerable more sun. When planted for family use, two or three varieties can be planted to good advantage—an early, medium and late, in order to lengthen out the season. If properly cared for late pears may be kept for a considerable time after ripening. When grown especially for market there should not be too many varieties, as properly managed, one or two good varieties will pay a better profit than a large number of varieties. A rich, deep, rich soil is preferable in order to get a strong, vigorous growth.

Then plenty of peaches should be supplied. Weed vines, old vines or something of the kind can be put around the tree with banana, and will help to secure a better growth and tree less liable to be attacked by disease. There is rarely an overstock of pears in market, so that good prices can nearly always be depended upon.

GASES ABSORBED BY GRAPES

Trees, Garden Plants and Vineyards Damaged by Emanations from Chemical Works.

A German botanical journal has noted a case where trees, garden plants, and vineyards have shown damage resulting from their proximity to chemical works. Emanations from these works deposited powder on the foliage. Analyses of the powder showed that oxalic acid or its salts made up nearly one-third of it and that sodium compounds were also present. The leaves seemed especially sensitive on their lower sides.

The wine from the grapes grown in the neighborhood of the chemicals possessed a peculiar taste that was attributed to their absorption of the gases permeating the air.

FRUIT PICKER QUITE USEFUL

Wire Basket on Top of Long Pole Reaches into Branches—No Step Ladders Required.

For picking fruit that is beyond the unaided reach, a man in Montana patented the implement shown in the sketch. A basket-shaped wire device, open at one side, is fixed to the top of a long pole. Points of the wire come down in front so that an apple, or pear, or whatever the fruit may be can enter from the side, but will not fall out in front. Once the fruit is encompassed in this framework a

Handy Fruit Picker.

smart pull will detach it. With such a tool no stepladders are needed to strip a tree and fruit that hangs high may be reached without shaking the tree. Fruit that is shaken down is often bruised in its fall. Another advantage of this picker is that it enables one to secure the identical apple he may want without knocking down half a dozen others.

GARDEN SEED TESTING.

It is Important to Know Germinating Qualities of Stock.

As a rule, American gardeners pay very little attention to seed testing, depending mostly upon the seeds they buy as being strong and fresh. However, very often considerable quantities of seed are carried over from one season to another, and these are of more value than any new supplies, because we have proved them by actual cropping on our land and under our conditions. Hence it is very important to know the germinating qualities of such stock to avoid losses or delays.

There are several methods of seed testing in common use—planting seeds between layers of moist cloth, sowing in sand and sowing into ground. Each has its proper place and time. However, unless a test is carefully carried out it is worthless. Thus the operator must know the degree of heat and amount of moisture most suitable. The same treatment will not do for all. We must try to get as near as possible to natural conditions.

We must consider the season. Some seeds are very difficult to sprout in winter, and the nearer we approach their natural sprouting season the better the test, while others again refuse to sprout in great heat, such as the summer months. Thus we see a test made out of season may prove entirely worthless or, worse than that, very misleading.

During the winter months the sand test is the best, as seeds sprout more readily in clean sand than in moist earth, and the sand gives enough resistance to allow us to judge of the strength of the young plants, which the moist cloth test does not permit. The depth at which seeds should be tested must be decided upon according to season. Thus in the dark winter months very little covering is permissible, while later on more covering is needed to allow for higher temperatures and rapid evaporation.—Gardening.

Talk things over with the hired man. It will help both you and him.

Value Loss of Silage Small. One reason why cornfields should be cut into the silo is that dried fodder, corn demonstrates rapidly and toward spring becomes hard, brittle and possesses little palatability. Silage, on the other hand, is much more palatable and is always relished by the animals summer or winter.

Protecting Pipes From Frost. This diagram illustrates one way of protecting water pipes against frost. In the cut a is the pipe, b a partition through which the pipe runs, c the water tank, d the ground, e a wooden post and g an iron ring. In operation the post, which may be six to eight

inches in diameter, is split in the middle, as shown at e. The center is hollowed out slightly in each half, and into this space the pipe fits. The iron ring at g holds the halves firmly together. This protection might and probably would in actual practice continue on through the wall of the building. It could be arranged for by setting the pipe at a greater angle.—American Agriculturist.

Don't let two weeds grow this year where none grew before.

Poultry Pointers.

One-half teaspoonful of vaseline and ten drops of carbolic acid made into a soft paste with sulphur and rubbed on the sores is said to be a sure cure for sorehead or chicken pox.

Iron in some form makes a good tonic. What is called "the Douglas mixture" is used by many poultrymen. It is composed of sulphate of iron, eight ounces; sulphuric acid, one-half fluid ounce; water, one gallon. Dose, one gill in the drinking water for every twenty-five fowls.

Convenient coops for marketing the chickens will pay not only in the satisfaction that they afford, but in the greater convenience.

Nothing is gained in hardness by letting the chickens run out in the rain, snow or cold winds.

A thorough coating of whitewash with 3 per cent crude carbolic acid will settle the mite problem for the winter.

The cap sheet of poultry culture is cleanliness. Cleanliness means that the poultry houses, yards and surroundings should be kept sanitary and fit for the fowls to live in.

Warm milk is an excellent feed for chickens that are sick or off feed. In fact, milk is one of the very best feeds for chickens of all kinds and at all times.

MOST ACCEPTABLE JUST NOW

Three Recipes That Are Particularly Appropriate at This Time of the Year.

The Cresses.—Pepper grass or garden cress resembles in appearance and flavor the better known water cress. The wild cress growing in constantly running meadow brooks is the tenderest and the entire plant is eaten. The pleasant, pungent flavor makes it an agreeable addition to the salad plants and a very attractive garniture for meat and fish dishes. Be sure and break off all the roots. Do not use a knife, however.

Sorrel and Spinach Soups.—This is a good summer soup. To a quart of sorrel add a handful of spinach and a few lettuce leaves. Put them in a saucepan with a large piece of butter and cook tender. Add two quarts of boiling water, season to taste with salt and pepper, and just before serving add two well-beaten eggs and half a cupful of cream. This is an excellent soup for an invalid.

Boiled Spinach, French Method.—Use half a peck of spinach. Wash and pick over the leaves, carefully removing all the wilted ones and the roots. When thoroughly washed put into boiling water with a pinch of soda to keep the bright green color, and cook tender. Then drain in a colander and drizzle with cold water. This gives firmness and delicacy attained in no other way. Shake free from water, chop fine, and put into a saucepan. Stir in a tablespoonful of butter, salt and pepper to suit the taste. Add two tablespoonfuls of good cream, and stir until hot; then arrange on a heated dish and rice the yolks of hard-boiled eggs over the top, using the vegetable press for the purpose.

FOR THE BEST TOMATO SOUP

Ingredients Should Be of the First Order and Much Care Given to Its Preparation.

Peel two pounds of nice ripe tomatoes and cut in two. Remove seeds. Take a steaplan to hold four quarts of liquid, put therein two ounces of butter, one onion finely chopped, and melt together for three minutes to heat only, but not to color, otherwise the soup will be spoiled, adding one teaspoonful of castor sugar and a little salt. Remove from the fire and add a large tablespoonful of flour. Drop all the tomatoes into the mixture and mix well together. Then add two quarts of meat stock (not clarified), boil briskly, stirring all the while; then allow to boil gently for one hour. Skim off grease from time to time and pass through a fine sieve; return to steaplan, season with pepper and salt or tabasco, and, if not thick enough, a little arrowroot or cornstarch diluted in a little cold water will slightly thicken and add to the smoothness. This soup is particularly nice with rice, and the starch water in which the rice is boiled will serve to thicken the tomato soup.

Chicken a La Monte Carlo.

Melt two tablespoons of butter in an earthen dish or casserole with one carrot, three onions sliced, two bay leaves, salt, pepper and some thyme. Add a young fat fowl, cut into joints and let it get brown. Then add one pint of consommé and cover, air tight. Cook three-quarters of an hour. It must simmer all the time. If the fowl is old it will take longer to cook it. Add two tablespoons sherry, a dozen potato balls fried in butter, a dozen button mushrooms and some chopped parsley. Let it cook ten minutes more and serve in the sauce dish or the charn of it will be lost.

Almond Cream Squares.

Put two pounds of sugar and a little less than a gill of water into a saucepan. Place the pan on the fire and stir the sugar and water until the mixture starts to boil. When it is boiling thoroughly add a little less than a half a pint of cream, stirring it in and cook until it forms a soft ball when dropped in cold water. Take off the fire, add vanilla flavoring and stir until it looks creamy, sprinkling chopped dry blanched almonds in while stirring; then pour out on greased paper or a marble slab and cut into squares.

Asparagus Stewed.

Cut the points as far as they are perfectly tender into pieces not more than one-half an inch in length. Wash them and throw into boiling salted water. When they are tender, take out asparagus and lay aside for a few minutes. Have some pieces of toasted bread. Dip them into the water in which the asparagus was boiled. Buttermilk and place in dish, laying asparagus on top. Thicken with a little flour and add a piece of butter and salt to taste. Pour the mixture over the asparagus, and serve very hot.

Stale Bread.

One way of serving stale bread is to cut it in one-quarter-inch slices, remove crusts and cut each slice in three finger-shaped pieces. Toast on both sides, arrange in a dripping pan, sprinkle with grated cheese and bake until the cheese is melted.

Corn Oysters.

One-half can corn, three or four rolled crackers, two eggs, salt and pepper. Drop by spoonfuls into hot fat and fry. A good substitute for meat.

To Clean Pans.

When cleaning teapots, pot lids, the inside of pots and pans nothing can equal wet emery cloth. It is also good for cleaning tin or zinc basins.

Our Name

has been before the public for 30 years, most of the time right on the spot where we are now located.

Our Aim

constantly has been to sell the best goods in our lines, at the most reasonable prices. Our services are of the highest grade, our wares the best, and our equipment compares with the best of the larger cities. We endeavor constantly to increase our usefulness.
